Price Comparison for Residential Electricity Consumers

This document is valid from May 1, 2013 to October 31, 2013

Part A – Regulated Price Plan (RPP) if you purchase your electricity from your utility

If you purchase your electricity from your utility, your electricity price is known as the "Regulated Price Plan" or RPP. RPP prices are set by the Ontario Energy Board, the independent regulator, and can change every six months (May 1st and November 1st). The table below shows the RPP prices that are in effect today for consumers on time-of-use pricing. The "Estimated Monthly Electricity Supply Cost" shown is **only for the cost of the electricity** that you use, which already includes a **forecast cost for the "Global Adjustment"** of 6.61 ¢ / kWh. You also have to pay **delivery charges, regulatory charges** and the **debt retirement charge** to your utility every month, as well as any taxes payable on your total monthly bill. For an explanation of these charges please visit www.ontarioenergyboard.ca.

The table below is based on a **residential consumer** who uses 800 kWh per month on time-of-use pricing and whose **pattern of electricity use** is: 64% of use in the off-peak period, 18% of use in the mid-peak period and 18% of use in the on-peak period. If your pattern of electricity use is different, your "Estimated Monthly Electricity Supply Cost" will also be different.

RPP Time-of-Use Prices

Off-peak	512.0	kWh	X	**6.7**	¢ / kWh	=	**$ 34.30**
Mid-peak	144.0	kWh	X	**10.4**	¢ / kWh	=	**$ 14.98**
On-peak	144.0	kWh	X	**12.4**	¢ / kWh	=	**$ 17.86**
			Estimated Monthly Electricity Supply Cost				**$ 67.14**

Time-of-use pricing is being phased in throughout the Province to replace tiered pricing. If you are still on tiered RPP pricing, your "Estimated Monthly Electricity Supply Cost" will be different. You can contact your utility to see when time-of-use pricing will apply to you.

Try the interactive online bill calculator at **www.ontarioenergyboard.ca** on the Ontario Energy Board's website to do your own price comparisons and estimate your total monthly bill.

Part B – Contract price if you purchase your electricity from

Just Energy - My Time Electricity Program

The information below has been **prepared by the electricity Retailer** that gave you this document. It describes the contract price that is being offered to you. The contract price is **only for the cost of the electricity** that you use. You also have to pay **delivery charges, regulatory charges** and the **debt retirement charge** to your utility every month, as well as any taxes payable on your total monthly bill. You will also have to pay the **Global Adjustment** every month – a forecast cost is included below, but the actual amount can vary.

Estimated Agreement Price with Just Energy for usage of 800 kWh per month:

Estimated Monthly Electricity Supply Price*: 800 kWh x 3.69¢/ kWh = $29.52

Forecast of Global Adjustment‡ : 800 kWh x 6.61 ¢/ kWh = $52.88

Regulatory Charge** = $0.20

Estimated Monthly Electricity Supply Cost: $29.52 + $52.88 + $0.20 = $82.60

*The Just Energy MyTime Rate is inclusive of the Global Adjustment and will always be 0.1 cent less than the Mid-Peak RPP price. The MyTime Rate may change every six months on May 1 and November 1 as Mid-Peak RPP prices change. Visit http://www.ontarioenergyboard.ca/OEB/Consumers/Electricity/Electricity+Prices for the current mid-peak pricing. Refer to your Agreement for further details.

‡ Forecast of Global Adjustment: The Global Adjustment may change monthly over the term of the Agreement.

** Regulatory Charge is a variable monthly charge passed through to you in order to cover costs incurred under the Ontario Energy Board's Cost Assessment Model.

I acknowledge that I have read and understood this price comparison.
